New strategies and new ways of how to explain the relationship between breeding values of offspring and the breeding value of parents. This relationship can be expressed formally as

$$u_i = \frac{1}{2}u_s + \frac{1}{2}u_d + m_i$$

Numbered equation

$$u_i = \frac{1}{2}u_s + \frac{1}{2}u_d + m_i \tag{1}$$
